Bona Red Out™

WATERBORNE 2-STEP COLOR NEUTRALIZER

Simple, easy-to-use solution to remove red and pink hues commonly found in red oak flooring and other wood species with red tones.

Bona Red Out™ is a two-step waterborne color neutralizer designed to reduce red and pink tones to help mimic the look of white oak wood flooring. Bona Red Out is safe to use on multiple wood species from red oak to Brazilian cherry. This unique product is very low odor, dries quickly, and is compatible with the entire Bona System® to allow easy preparation for staining, sealing, and finishing, making it the perfect first step to achieve lighter tones including a nordic look no matter the color or species of wood.

Bona Red Out is safe for all residential and commercial flooring surfaces where a lighter, natural style is preferred. Because it is a waterborne product, there is also no need to water pop the floor prior to staining, saving valuable time. There is no pot life with Bona Red Out so there is minimal waste and it can be used across multiple jobs. Plus, the product can be diluted with water for easy customization to fit any project needs.

Bona Red Out is a game-changer for projects involving lacing into existing floors and is a proven method for offering a more sustainable solution to change the appearance of wood by getting the red out while avoiding the tear-out of existing floors.

FEATURES AND BENEFITS

- Minimizes the red/pink hues commonly found in red oak flooring
- Simple, easy-to-use 2-step process
